PIPERIDINE DERIVATIVES AS RENIN INHIBITORS FOR THE TREATMENT OF HYPERTENSION

#### FIELD OF THE INVENTION

This invention relates to piperidine derivative useful as inhibitors of renin.

5

-:20

#### BACKGROUND OF THE INVENTION

Renin is an endopeptidase (molecular weight about 40,000) produced and secreted by the juxtaglomerular cells of the kidney, which cleaves the naturally-occurring plasma glycoprotein; antiotensinogen. Renin cleaves angiotensinogen, its protein substrate, to split off the hemodynamically-inactive N-terminal decapeptide, angiotensin I, which is converted in the lungs, kidney or other tissue by angiotensin-converting enzyme to the potent pressor octapeptide, angiotensin II. Angiotensin II is known to be a potent pressor substance, i.e., a substance that is capable of inducing a significant increase in blood pressure, and is believed to act by causing the constriction of blood vessels and the release of the sodium-retaining hormone aldosterone from the adrenal gland. Thus, the renin-angiotensinogen system has been implicated as a causative factor in hypertension congestive heart failure, end organ failure, stroke, myocardial infarction, glaucoma and hyperaldosteronism.

Inhibitors of angiotensin I converting enzyme have proven useful in the modulation of the renin-angiotensin system. Consequently, specific inhibitors of the limiting enzymatic step that ultimately regulates angiotensin II production, the action of renin on its substrate, are sought as effective therapeutic agents in the treatment of hypertension, and congestive heart failure.

#### SUMMARY OF THE INVENTION

Generally, the present invention relates to piperidine derivative renin inhibitors. One embodiment is a compound of Formula I

T is substituted or unsubstituted aryl, or substituted or unsubstituted heteroaryl; W is substituted or unsubstituted aryl, or substituted or unsubstituted heteroaryl; and  $R^{17}$  is hydrogen or  $C_1$ - $C_3$  alkyl.

Another embodiment is a pharmaceutical composition comprising a compound of Formula I admixed with a pharmaceutically acceptable carrier, diluent, or excipient.

Another embodiment is a method of inhibiting renin in a mammal comprising administering to the mammal in need thereof an effective amount of a compound of Formula L.

Other embodiments include methods of treating or preventing hypertension, congestive heart failure, stroke, myocardial infarction, glaucoma, or hyperaldosteronism in a mammal comprising administering to the mammal in need thereof an effective amount of a compound of Formula I.

Another embodiment is a method of providing end organ protection in a mammal comprising administering to the mammal in need thereof an effective amount of a compound of Formula I.

Yet another embodiment is a process for preparing a compound of claim I including the steps of

a) alkylation of piperidine 1 to afford the intermediate 2 where  $R^{20}$ , along with the oxygen to which it is attached, is equivalent to  $-\mathbb{Z}$ -W as defined above for Formula I;

b) oxidation of 2 to afford the piperidinone intermediate 3;

c) contacting 3 with a suitable amine to afford the intermediate 4, where  $R^{21}$ , along with the nitrogen to which it is attached is equivalent to -Q-T as defined above for Formula I;

d) deprotection of 4 to afford 5

The above summary of the present invention is not intended to describe each disclosed embodiment or every implementation of the present invention. The detailed description which follows more particularly exemplifies these embodiments.

### DETAILED DESCRIPTION OF THE INVENTION

The present invention is believed to be applicable to inhibitors of renin. In particular, the present invention is directed to piperidine derivatives useful as inhibitors of renin. While the present invention is not so limited, an appreciation of various aspects of the invention will be gained through the following discussion and the examples provided below.

Alkyl, alkoxy, etc. denote both straight and branched groups; but reference to an individual radical such as "propyl" embraces only the straight chain radical, a branched chain isomer such as "isopropyl" being specifically referred to.

As used in this specification and the appended claims, the singular forms "a", "an", and "the" include plural referents unless the content clearly dictates otherwise. Thus, for example, reference to a composition containing "a compound" includes a mixture of two or more compounds.

The recitation of numerical ranges by endpoints includes all numbers subsumed within that range (e.g. 1 to 5 includes 1, 1.5, 2, 2.75, 3, 3.80, 4, and 5).

The term "halogen" or "halo" as used herein includes chlorine, fluorine, bromine, and iodine.

The term "oxo" as used herein refers to =0.

The term "thioxo" as used herein refers to =S.

WO 2004/089903 PCT/IB2004/001162

-7-

The term "hydroxy" or "hydroxyl" as used herein refers to -OH.

The term "methylene" as used herein refers to -CH<sub>2.5.6.6</sub>

The term "alkyl" as used herein refers to a monovalent straight or branched hydrocarbon radical having 1 to 12 carbon atoms. Alkyl groups can be unsubstituted or substituted with one.

5. or more of the substituents selected from halogen, -OH, -MH<sub>2</sub>, or -MH R', where R' is unsubstituted C<sub>1</sub>-C<sub>3</sub> alkyl. Alkyl groups are assumed to be unsubstituted unless specifically denoted as substituted. Examples of alkyl groups include, but are not limited to, methyl, ethyl, n-propyl, isopropyl, n-butyl, sec-butyl, isobutyl, tert-butyl, n-pentyl, and n-hexyl. Examples of substituted alkyl groups include, but are not limited to, trifluoromethyl, hydroxymethyl, aminomethyl, and methylaminomethyl.

The term "lower" as used herein refers to a group having 1 to 3 carbon atoms. For example "lower alkyl" as used herein refers to a subset of alkyl which means a straight or branched hydrocarbon radical having from 1 to 3 carbon atoms and includes, for example, methyl, ethyl, n-propyl, and isopropyl.

15 The term "alkylene" as used herein refers to a divalent straight or branched chain hydrocarbon radical having 1 to 12 carbon atoms. Alkylene groups can be unsubstituted or substituted with one or more of the substituents selected from halogen, -OH, -NH<sub>2</sub>, or -NH R", where R" is unsubstituted C<sub>1</sub>-C<sub>3</sub> alkyl. Examples of "alkylene" as used herein include, but are not limited to, methylene, ethylene, propane-1,3-diyl, propane-1,2-diyl, butane-1,4-diyl, pentane-1,5-diyl, and hexane-1,6-diyl.

As used herein, "cycloalkyl" refers to an alicyclic hydrocarbon group having 3 to 8 carbon atoms. Examples of "cycloalkyl" as used herein include, but are not limited to, cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl, cycloheptyl, and cyclooctyl.

The term "cycloalkylene" as used herein refers to an alicyclic divalent hydrocarbon

25 radical having 3 to 6 carbon atoms. Examples of "cycloalkylene" as used herein include; but are
not-limited to, cyclopropane-1,1-diyl, cyclopropane-1,2-diyl, cyclobutane-1,2-diyl,
cyclopentane-1,1-diyl, cyclopentane-1,3-diyl, cyclohexane-1,1-diyl, cyclohexane-1,2-diyl,
cyclohexane-1,3-diyl, cyclohexane-1,4-diyl, and cyclooctane-1,5-diyl.

The term "heterocycloalkyl" as used herein refers to an alicyclic hydrocarbon group having 3 to 6 carbon atoms and containing one to three nonadjacent heteroatomic substitutions independently selected from S, O, and NH. Examples of "heterocycloalkyl" as used herein include, but are not limited to, tetrahydrofuryl, 1,4-dioxyl, 1,3-dioxyl, piperidinyl, pyrrolidinyl, morpholinyl, thiomorpholinyl, tetrahydropyranyl, tetrahydrothiopyranyl, tetrahydrothiophenyl, oxazolidinyl, Isoxazolidinyl, isethiazolidinyl, thiazolidinyl, [1,2]oxathiolanyl, [1,3]oxathiolanyl,

· 5

-8-[1,2]oxazinanyl, [1,3]oxazinanyl, [1,2]oxathianyl, [1,3]oxathianyl, and [1,4]oxathianyl. For week to the heterocycles containing sulfur, the oxidized sulfur heterocycles containing SO or SO2 groups and the sulfur heterocycles containing sulfur, the oxidized sulfur heterocycles containing so or SO2 groups and the sulfur heterocycles containing sulfur, the oxidized sulfur heterocycles containing sulfur heterocycl are also included. Examples include the sulfoxide and sulfone forms of tetrahydrothiophene. The term "heterocycloalkylene" as used herein refers to an alicyclic divalent hydrocarbon radical having 3 to 6 carbon atoms and containing one to three nonadjacent heteroatomic substitutions independently selected from S, O, and NH. Examples of "heterocycloalkylene" as used herein include, but are not limited to, tetrahydropyran-4,4-diyl, tetrahydropyran-2,3-diyl, tetrahydropyran-3,4-diyl, tetrahydropyran-2,6-diyl, tetrahydropyran-- 3,5-diyl, piperidine-4,4-diyl, piperidine-2,3-diyl, piperidine-3,4-diyl, piperidine-2,6-diyl, = 10 piperidine-3,5-diyl, tetrahydrothiopyran-4,4-diyl, tetrahydrothiopyran-2,3-diyl, tetrahydrothiopyran-3,4\*diyl, tetrahydrothiopyran-2,6-diyl, tetrahydrothiopyran-3,5-diyl, tetrahydrofuran-3,3-diyl, tetrahydrofuran-2,3-diyl, tetrahydrofuran-3,4-diyl, tetrahydrofuran-2,5diyl, pyrrolidine-3,3-diyl, pyrrolidine-2,3-diyl, pyrrolidine-3,4-diyl, pyrrolidine-2,5-diyl, tetrahydrofhiophene-3,3-diyl, tetrahydrofhiophene-2,3-diyl, tetrahydrofhiophene-3,4-diyl, 15 - Stetrahydrothiophene-2,5-diyl, morpholine-2,3-diyl, thiomorpholine-2,3-diyl, [1,4]oxathiane-2,3-diyl, morpholine-2,3-diyl, morpho diyly oxazolidine-4,5-diyl, [1,3]oxathiolane-4,5-diyl, and thiazolidine-4,5-diyl: radicals having a single ring, such as phenyl, or multiple condensed rings, such as naphthyl or anthryl. Aryl groups may be unsubstituted or substituted with 1 to 5 substituents selected from where R<sup>2</sup> and R" are as defined above, C<sub>1</sub>-C<sub>6</sub> alkyl, C<sub>1</sub>-C<sub>6</sub> alkyl wherein 1 to 3 nonadjacent carbons are replaced with O, NR<sup>16</sup>, S or a combination thereof, (C<sub>1</sub>-C<sub>6</sub> alkyl)-C(O)-O-(C<sub>1</sub>-C<sub>6</sub>  $alkyl)_{0:1-7}$  (C<sub>1</sub>-C<sub>6</sub>  $\overline{NR}^{16}$ :  $\overline{C(O)}$ - $\overline{(C_1-C_6 \text{ alkyl})_{0.1}}$ -, trifluoromethyl,  $\overline{(C_1-C_6 \text{ alkyl})}$ - $\overline{C(O)}$ - $\overline{NR}^{16}$ - $\overline{(C_1-C_6 \text{ alkyl})_{0.1}}$ -,  $\overline{HO}$ - $\overline{C(O)}$ - $\overline{NR}^{16}$ - $\overline{NR}^{16$  $25^{-1} C(O) - (C_1 - C_6 alkyl) - (C_1 - C_6 alkyl) - C(O) - (C_1 - C_6 alkyl) - (C$ alkyl) $_{0.1}$ -, ( $C_1$ - $C_6$  alkyl)-NR $_{0.1}$ -NR $_{0.1}$ -, or HO-( $C_1$ - $C_6$  alkyl), wherein each R $_{0.1}$ - independently H or  $C_1$ - $C_6$  alkyl. Such an aryl ring may be optionally fused to one or more of another heterocycloalkyl ring(s), heteroaryl ring(s), or cycloalkyl rings. Examples of aryl groups include, but are not 30 climited to, anthryl, naphthyl, phenyl, biphenyl, chromanyl, 2-oxo-4a,8a-dihydro-2H-chromenyl 1,2,3,4-tetrahydroquinolinyl, 2-oxo-1,2,3,4-tetrahydroquinolinyl, 3,4-dihydro-2Hbenzo[1,4]oxazinyl, 3-oxo-3,4-dihydro-2H-benzo[1,4]oxazinyl, indanyl, 2,3-dihydroindolyl, 1,2,3,4-tetrahydroquinazolinyl, 2-oxo-1,2,3,4-tetrahydroquinazolinyl, 2,3-dihydrobenzoxazolyl, 1,2,3,4-tetrahydronaphthyl, 1,2,3,4-tetrahydroisoguinolinyl, 1,2,3,4-tetrahydroquinoxalinyl,

1,2,3,4-tetrahydro-cinnolinyl, 1,2,3,4-tetrahydro-phthalazinyl, 2,3-dihydroindolyl, 1,2,3,4tetrahydroindolyl; Specific examples of those aryl groups disclosed immediately above include. 2-oxo-1,2,3,4-tetrahydroquinolin-7-yl, 2-oxo-1,2,3,4-tetrahydroquinolin-6-yl, 4-oxo-1,2,3,4tetrahydroquinolin-7-yl, 4-oxo-1,2,3,4-tetrahydroquinolin-6-yl, 3-oxo-3,4-dihydro-2H-Action Control ... 5 benzo[1,4]oxazin-6-yl, 3-oxo-3,4-dihydro-2H-benzo[1,4]oxazin-7-yl, indan-6-yl, 2-oxo-1,2,3,4- ... tetrahydroquinazolin-7-yl, 2,3-dihydrobenzoxazol-5-yl, 2-oxo-4a,8a-dihydro-2H-chromen-7-yl, ..... 2,3-dihydroindol=6-yl, 2-oxo-2,3-dihydroindol-6-yl, and 2,3-dihydro-isoindolyl. Examples of The substituted 142,3,4-tetrahydroquinolinyl include, but are not limited to, 1-(3-hydroxypropyl)-3,4-10-1-2 dihydro-2H-quinolin-7-yl, 1-(3-hydroxypropyl)-2-oxo-3,4-dihydro-2H-quinolin-7-yl, 1-acetyl-research 10 3,4-dihydro-2H-quinolin-6-yl, 1-acetyl-2-oxo-3,4-dihydro-2H-quinolin-6-yl, 1-(4control thiazolylmethyl)-3,4-dihydro-2H-quinolin-7-yl, 1-acetamidyl-3,4-dihydro-2H-quinolin-7-yl, 1-acetamidylnacetamidyl-2-oxo-3;4-dihydro-2H-quinolin-7-yl, 1-acetamidyl-3,4-dihydro-2H-quinolin-6-yl, decreased acetamidyl-2;oxo-3;4-dihydro-2H-quinolin-6-yl, 1-(2-acetylaminoethyl)-3,4-dihydro-2H--74974- quinolin-7-yl, 1-(3-methoxy-3-oxopropyl)-3,4-dihydro-2H-quinolin-7-yl, 1-(3-methoxypropyl)-4,4-dihydro-2H-quinolin-7-yl, 1-(3-methoxypropy 154.4 3;4-dihydro-2H-quinolin-7-yl, 15(2-methoxy-2-oxoethyl)-3,4-dihydro-2H-quinolin-7-yl 1-(2-5.5-0.00-0) ethoxy-2-oxoethyl)-3,4-dihydro-2H-quinolin-7-yl, 1-(2-acetylaminoethyl)-3,4-dihydro-2Henterprise quinolin-6-yl, 1=(3-methoxy-3-oxopropyl)-3;4-dihydro-2H-quinolin-6-yl, 1-(3-methoxypropyl)+3;4-dihydro-2H-quinolin-6-yl, 1-(3-methoxypr ் சார்க்க 3,4-dihydro-2H-quinolin-6-yl, 1-(2-methoxy-2-oxoethyl)-3,4-dihydro-2H-quinolin-6-yl, 1-(2-ங்க கிட்கி ethoxy-2-oxoethyl)-3,4-dihydro-2H-quinolin-6-yl, 2-oxo-1,2,3,4-tetrahydro-2H-quinolin-7-yl, 2-max-1 20 oxo-1,2,3,4-tetrahydro-2H-quinolin-6-yl, 1-(2-acetylaminoethyl)-2-oxo-3,4-dihydro-2Hes quinolin-7-yl, 1-(3-methoxy-3-oxopropyl)- 2-oxo-3,4-dihydro-2H-quinolin-7-yl, 1-(3methoxypropyl)-2-oxo-3,4-dihydro-2H-quinolin-7-yl, 1-(2-methoxy-2-oxoethyl)-2-oxo-3,4-dihydro-2H-quinolin-7-yl, 1-(2-methoxy-2-oxoethyl)-2-oxo-3,4-dihydro-Town 1.1. dihydro-2H-quinolin-7-yl, 1-(2-ethoxy-2-oxoethyl)-.2-oxo-3,4-dihydro-2H-quinolin-7-yl, 1-(2-thoxy-2-oxoethyl) 25 dihydro-2H-quinolin-6-yl, 1-(3-methoxypropyl)-2-oxo-3,4-dihydro-2H-quinolin-6-yl, 1-(2-100) are the control of the control methoxy-2-oxoethyl)- 2-oxo-3,4-dihydro-2H-quinolin-6-yl, 1-(2-ethoxy-2-oxoethyl)- 2-oxo-3,4-di adihydro-2H-quinolin-6-yl, 1-(2-acetoxyethyl)-2-oxo-3,4-dihydro-2H-quinolin-6-yl, 1-(2-acetoxyethyl) acetoxyethyl)-2-oxo-3,4-dihydro-2H-quinolin-7-yl, 1-(2-acetoxyethyl)-3,4-dihydro-2Hquinolin-6-yl and 1-(2-acetoxyethyl)-3,4-dihydro-2H-quinolin-7-yl Examples of substituted 3,4-dihydro-2H-benzo[1,4]oxazinyl include, but are not-limited 2H-benzo[1,4]oxazin-6-yl, 4-(3-methoxypropyl)-3-oxo-3,4-dihydro-2H-benzo[1,4]oxazin-6-yl, dihydro-2H-benzo[1,4]oxazin-6-yl, 4-(2-acetoxyethyl)-3-oxo-3,4-dihydro-2H-benzo[1,4]oxazin-6-yl

L. and the same The Both of the Heterorylene groups may be unsubstituted or substituted with those substituents enumerated for the the both the substituted and the substituted with those substitutents enumerated for the substituted and the substituted are substituted as the su probable of heteroarylene groups include, but are not limited to, furan-2,5-diyl, and the street was the street thiophene-2,4-diyl, 1,3-thiazole-2,4-diyl, 1,3-thiazole-2,5-diyl, pyridine-2,4-diyl, pyridine-2,3-thiazole-2,4-diyl, 1,3-thiazole-2,5-diyl, pyridine-2,4-diyl, pyridine-2,3-thiazole-2,5-diyl, pyridine-2,4-diyl, pyridine-2,5-diyl, pyridine-2 20 - diyl, pyridine-2,5-diyl, pyrimidine-2,4-diyl, and pyrimidine-2,5-diyl.

The term "alkoxy" as used herein refers to -O-alkyl groups where "alkyl" is defined

An "effective amount" is an amount of a compound of the present invention that when administered to a patient ameliorates a symptom of disorders associated with renin activity such as hypertension and congestive heart failure. A therapeutically effective amount of a compound of the present invention can be easily determined by one skilled in the art by administering a quantity of a compound to a patient and observing the result. In addition, those skilled in the artenance are familiar with identifying patients having disorders associated with renin activity such as hypertension and congestive heart failure.

The term "treating" as used herein refers to the administration of a compound of Formula I, Formula II or pharmaceutically acceptable salts thereof that eliminates, alleviates, inhibits the progression of, or reverses progression of, in part or in whole, any one or more of the pathological hallmarks or symptoms of any one of the diseases and disorders being treated,

Higher traditionable (Heat 1975)

The term "preventing" as used herein refers to the prophylactic administration of a compound of Formula I, Formula II or pharmaceutically acceptable salts thereof to an asymptomatic patient at risk for the disease or disorder being prevented to inhibit the onset of an associated pathological hallmark or symptom, including, but not limited to, hypertension, congestive heart failure, stroke, myocardial infarction, glaucoma, and hyperaldosteronism. Additionally, once the onset of a pathological hallmark or symptom has begun, preventing means the prevention of further progression or reversal of progression, in part or in whole, of the pathological hallmark or symptom. 46-7-8-16-5

The term "pharmaceutically acceptable salts, esters, amides, and prodrugs" as used herein refers to those carboxylate salts, amino acid addition salts, esters, amides, and prodrugs of the compounds of the present invention which are, within the scope of sound medical judgment; and a south the tissues of patients without undue toxicity, irritation; allergic and the content of the content response, and the like, commensurate with a reasonable benefit/risk ratio, and effective for their reasonable intended use, as well as the zwitterionic forms, where possible, of the compounds of the invention. The term "salts" refers to the relatively non-toxic, inorganic and organic acid addition. salts of compounds of the present invention. These salts can be prepared in situ during the final constant isolation and purification of the compounds or by separately reacting the purified compound in the compound in 10.20 writs free base form with a suitable organic or inorganic acid and isolating the salt thus formed. (1) 100 100

the fermion provides compounds capable of inhibiting renin. Compounds of the present invention are described by Formula I: Language and

The intermediate 4 is then deprotected to afford the final product 5 which corresponds to compounds of Formula I. Deprotection of intermediate 4 can be accomplished using deprotection methods recognized in the art. For example, the deprotection of intermediate 4 can be accomplished with acetyl chloride in an art recognized solvent such as methanol, at about 0°C to about the reflux temperature of the solvent employed.

15

Not all compounds of the invention falling into a given class may be compatible with some of the reaction conditions described. Such restrictions are readily apparent to those skilled in the art of organic synthesis, and alternative methods must then be used.

Some of the compounds of Formulae I-V are capable of further forming pharmaceutically acceptable acid-addition and/or base salts. All of these forms are within the scope of the present invention. Thus, pharmaceutically acceptable acid addition salts of the compounds of Formulae I and II include salts derived from nontoxic inorganic acids such as hydrochloric, nitric, phosphoric, sulfuric, hydrobromic, hydriodic, hydrofluoric, phosphorous, and the like, as well as the salts derived from nontoxic organic acids, such as aliphatic mono-

and dicarboxylic acids, phenyl-substituted alkanoic acids, hydroxy alkanoic acids, alkanedioic acids, phenyl-substituted alkanoic acids, hydroxy alkanoic acids, alkanedioic acids, aromatic acids, aliphatic and aromatic sulfonic acids, etc. Such salts thus include sulfate, acids, aromatic sulfonic acids, etc. Such salts thus include sulfate, acids, aromatic sulfonic acids, etc. Such salts thus include sulfate, acids, acids, etc. pyrosulfate, bisulfate, sulfite, bisulfite, nitrate, phosphate, monohydrogenphosphate, dihydrogenphosphate, metaphosphate, pyrophosphate, acetate, trifluoroacetate, propionate, acetate, propionate, mandelate, benzoate, chlorobenzoate, methylbenzoate, dinitrobenzoate, phthalate, benzensoulfonate, toluenesulfonate, phenylacetate, citrate, lactate, maleate, tartrate, 54270 N. C. 6 methanesulfonate, and the like. Also contemplated are salts of amino acids such as arginate and the like. satisfies the like and gluconate, galacturonate (see, for example, Berge S.M. et al., "Pharmaceutical in the like and gluconate, galacturonate (see, for example, Berge S.M. et al., "Pharmaceutical in the like and gluconate, galacturonate (see, for example, Berge S.M. et al., "Pharmaceutical in the like and gluconate, galacturonate (see, for example, Berge S.M. et al., "Pharmaceutical in the like and gluconate, galacturonate (see, for example, Berge S.M. et al., "Pharmaceutical in the like and gluconate, galacturonate (see, for example, Berge S.M. et al., "Pharmaceutical in the like and gluconate, galacturonate (see, for example, Berge S.M. et al., "Pharmaceutical in the like and gluconate, galacturonate (see, for example, Berge S.M. et al., "Pharmaceutical in the like and gluconate, galacturonate (see, for example, Berge S.M. et al., "Pharmaceutical in the like and galacturonate (see, for example, Berge S.M. et al., "Pharmaceutical in the like and galacturonate (see, for example, Berge S.M. et al., "Pharmaceutical in the like and galacturonate (see, for example, Berge S.M. et al., "Pharmaceutical in the like and galacturonate (see, for example, Berge S.M. et al., "Pharmaceutical in the like and galacturonate (see, for example, Berge S.M. et al., "Pharmaceutical in the like and galacturonate (see, for example, Berge S.M. et al., "Pharmaceutical in the like and galacturonate (see, for example, Berge S.M. et al., "Pharmaceutical in the like and galacturonate (see, for example, Berge S.M. et al., "Pharmaceutical in the like and galacturonate (see, for example, Berge S.M. et al., "Pharmaceutical in the like and galacturonate (see, for example, Berge S.M. et al., "Pharmaceutical in the like and galacturonate (see, for example, Berge S.M. et al., "Pharmaceutical in the like and galacturonate (see, for example, Berge S.M. et al., "Pharmaceutical in the like and galacturonate (see, for example, berge S.M. et al., "Pharmaceutical in the like and galacturonate (see, for example, berge S.M. et al., "Pharmaceutical in the l 10 Salts," Journal of Pharmaceutical Science, 1977;66:1-19). The acid addition salt of said basic compounds are prepared by contacting the free base form with a sufficient amount of the desired acid to produce the salt in the conventional manner was the subsection salts are formed with metals or amines, such a company of the Pharmaceutically acceptable base addition salts are formed with metals or amines, such a company of the Pharmaceutically acceptable base addition salts are formed with metals or amines, such a company of the Pharmaceutically acceptable base addition salts are formed with metals or amines, such a company of the pharmaceutically acceptable base addition salts are formed with metals or amines, such a company of the pharmaceutically acceptable base addition salts are formed with metals or amines, such a company of the pharmaceutically acceptable base addition of the company of the pharmaceutically acceptable base addition of the company of the pharmaceutically acceptable base addition of the company of the c warmanas alkali and alkaline earth metals or organic amines. Examples of metals used as cations are 15 Mysodium, potassium, magnesium, calcium, and the like. Examples of suitable amines are 1982 N.N'-dibenzyleth ylenediamine, chloroprocaine, choline, diethanolamine, dicyclohexylamine, a resolvent ethylenediamine, N-methylglucamine, and procaine (see, for example, Berge S.M., supra, in the service of the se and a fin (1977) in the latter control of the base addition salts of said acidic compounds are prepared by contacting the free acid to the 20 form with a sufficient amount of the desired base to produce the salt in the conventional manner. with the Trisome situations, compounds of the invention may exist in isomeric form; for example, as tautomers, enantiomers, or diasteromers. Some compounds may exhibit polymorphism: All a second of the last second of the las name that tautomers, enantiomers, and diasteromers are incorporated within the definition of the analysis of the The compounds of the invention. It is further to be understood that the present invention - Compounds of the invention. 25 : encompasses any racemie, optically-active, polymorphic, or stereoisomeric form, or mixtures thereof, of a compound of the invention, which possess the useful properties described herein, its many being well known in the art how to prepare optically active forms (for example, by resolution of the racemic form by recrystallization techniques, by synthesis from optically-active starting and the racemic form by recrystallization techniques, by synthesis from optically-active starting materials, by chiral synthesis, or by chromatographic separation using a chiral stationary phase) and how to determine activity or cytotoxicity using the standard tests described herein, or using other similar tests which are well known in the art. Certain of the compounds of the present invention can exist in unsolvated forms as well as solvated forms, including hydrated forms. In general, the solvated forms, including hydrated AND HOUSE OF THE STATE OF THE S 医原性原性 医肾髓管 医皮膜囊肿

40

Generally, the concentration in a semi-solid or solid composition such as a gel or a powder will be about 0.1-5 wt-%, preferably about 0.5-2.5 wt-%.

Useful dosages of the compounds of Formulae I and II can be determined by comparing their in vitro activity, and in vivo activity in animal models. The amount of the compound, or an increase of

active salt or derivative thereof, required for use in treatment will vary not only with the particular salt selected but also with the route of administration, the nature of the condition being treated and the age and condition of the patient and will be ultimately at the discretion of the attendant physician or clinician.

5

10

15

20

The compounds of the present invention can be administered to a patient at dosage levels in the range of about 0.1 to about 2,000 mg per day. For a normal human adult having a body weight of about 70 kilograms, a dosage in the range of about 0.01 to about 10 mg per kilogram of body weight per day is preferable. However, the specificadosage used can vary. For example, the dosage can depended on a numbers of factors including the requirements of the patient, the severity of the condition being treated, and the pharmacological activity of the compound being used. The determination of optimum dosages for a particular patient is well-known to those skilled in the art.

Ideally, the active ingredient should be administered to achieve peak plasma
concentrations of the active compound of from about 0.5 to about 75 µM, preferably, about 1 to
50 µM, most preferably, about 0.1 to about 5 µM. This may be achieved, for example, by the
intravenous injection of a 0.05 to 5% solution of the active ingredient, optionally in saline, or
orally administered as a bolus containing about 10-500 mg of the active ingredient. Desirable
blood levels may be maintained by multiple oral dosing, or continuous infusion to provide about
0.01-5.0 mg/kg/hr or by intermittent infusions containing about 0.4-15 mg/kg of the active
ingredient(s).

The desired dose may conveniently be presented in a single dose or as divided doses administered at appropriate intervals, for example, as two, three, four or more sub-doses per day.

The sub-dose itself may be further divided, e.g., into a number of discrete loosely spaced administrations; such as multiple inhalations from an insufflator or by application of a-plurality or of drops into the eye.

The following examples illustrate the various embodiments of the present invention. Those skilled in the art will recognize many variations that are within the spirit of the present invention and scope of the claims.

#### **BIOLOGICAL ASSAYS**

The ability of a compound of the present invention to inhibit renin is

demonstrated using pharmacological models that are well known to the art, for example, using models such as the tests described below.

5

## Determination of Renin IC<sub>50</sub> by tGFP FRET assay

The tGFP FRET (Green Fluorescent Protein Fluorescence Resonance Energy Transfer) assay utilizes a tandem GFP substrate (60kDa) containing nine amino acid recognition sequences for human renin flanked by two GFP proteins. The assay is used to determine the ability of a compound to act as an inhibitor of renin enzymatic activity by determination of that concentration of test-compound that inhibits by 50% (IC<sub>50</sub>) the ability of renin to cleave the tandem GFP substrate. The IC<sub>50</sub> values are determined over an 11-point curve at concentrations of 100 µM to 1pM. Each compound concentration used to construct the curve was dependent on renin inhibitor potency. For example, subnanomolar IC<sub>50</sub> values were determined over an 11point curve at concentrations of 10 µM to 1pM. All other IC50 values were determined over an 11-point curve at concentrations of 100 µM to .0065 µM. The concentrations were achieved by diluting a 9.1nM stock of Human recombinant renin in the appropriate amount of buffer containing 50mM HEPES, 1mM EDTA, 1% PEG (8000 MW), 1 mM DTT, 0,1% BSA, pH 7.4.to achieve the final concentration of 50.4 µIU. The tGFP substrate stock solution of 43µM was diluted with the appropriate amount of the above buffer to obtain the final concentration of 650 nM. In addition, 1 µI of the compound is diluted in DSMO to represent an eight-point log scale (5% final). The renin and compound are added to a 384 capacity plate by an automated robot (BIOMEK). The plate is incubated for 60 minutes; upon completion the tGFP substrate is addėd.

The IC<sub>50</sub> is determined by monitoring the increase in absorbance at 432/432 nm excitation, 530/475 nm emission with a cutoff at 515/455 nm, in a fluorometric plate reader. The results of this evaluation are shown in Table 1.

The foregoing biological tests establish that the compounds of the present invention are potent inhibitors of renin. Accordingly, the compounds of the present invention are useful in pharmaceutical formulations for preventing and treating disorders in which rennin plays a significant pathological role. Such disorders include hypertension and congestive heart failure, end organ protection, stroke, myocardial infarction, glaucoma and hyperaldosteronism.

To further assist in understanding the present invention, the following non-limiting examples of such renin inhibitory compounds are provided. The following examples, of course, should not be construed as specifically limiting the present invention, variations presently known or later developed, which would be within the purview of one skilled in the art and considered to fall within the scope of the present invention as described herein. Preferred synthetic routes for intermediates involved in the synthesis as well as the resulting rennin inhibitory compounds of the present invention follow. All reagents are commercially available (Aldrich Chemical of Milwaukee, Wisconsin) unless otherwise noted.

#### PREPARATION METHODS

Reagents used in the following examples can be prepared using the methods disclosed below in Methods A-M

# Method A: Synthesis of naphthalene-2-yl-methylamine

Naphthalene-2-carbonitrile (5.57 g, 36.4 mmoles) was hydrogenated in the presence of Raney Nickel in methanol and aqueous ammonia. The solution was concentrated under reduced pressure to a red semi-solid that was purified on silica gel (EtOAc:MeOH (4:1)), combined and concentrated under reduced pressure to a light pink solid (naphthalene-2-yl-methylamine (4.21 g, 74%).

# Method B: Synthesis of C-(6-methoxy-naphthalen-2-yl)-methylamine

10

25

6-Methoxy-naphthalene-2-carbonitrile (5.00 g, 27.0 mmoles) was hydrogenated in the presence of Raney Nickel in methanol and aqueous ammonia. The solution was concentrated under reduced pressure to a semi-solid. The semi-solid was partitioned between ethyl acetate and water (50 mL each), separated, washed with water, brine, dried with magnesium sulfate, filtered and concentrated under reduced pressure to a white solid (C-(6-methoxy-naphthalen-2-yl)-methylamine, 4.13 g, 81%).

## Method C: Synthesis of C-quinolin-7-yl-methylamine:

#### 20 Synthesis of 7-trifluoromethyl-quinoline:

4-Chloro-7-trifluoromethyl-quinoline (19.80 g, 100 mmoles) was hydrogenated in the presence of 5% palladium on carbon in methanol in the presence of triethylamine. The solution was concentrated under reduced pressure, partitioned between ethyl acetate and water (200 mL each), separated, washed with water (2 x 200 mL), dried with magnesium sulfate, filtered and concentrated under reduced pressure to a yellow solid (7-trifluoromethyl-quinoline, 15.20 g, 90%). H1-NMR was consistent.

Synthesis of quinoline-7-carboxylic acid methyl ester:

PCT/IB2004/001162 WO 2004/089903

-39-

7-Trifluoromethyl-quinoline (22.10 g, 112.1 mmols) was dissolved in 30% oleum, is the heated to 150C for 2h. The solution was cooled to room temperature and 200 mL of methanol or the solution was cooled to room temperature and 200 mL of methanol or the solution was cooled to room temperature and 200 mL of methanol or the solution was cooled to room temperature and 200 mL of methanol or the solution was cooled to room temperature and 200 mL of methanol or the solution was cooled to room temperature and 200 mL of methanol or the solution was cooled to room temperature and 200 mL of methanol or the solution was cooled to room temperature and 200 mL of methanol or the solution was cooled to room temperature and 200 mL of methanol or the solution was cooled to room temperature and 200 mL of methanol or the solution was cooled to room temperature and 200 mL of methanol or the solution was cooled to room temperature and 200 mL of methanol or the solution was cooled to room temperature and 200 mL of methanol or the solution was cooled to room temperature and 200 mL of methanol or the solution was cooled to room temperature and the solution was cooled to room the solution was considered and the solution was considered was added slowly and refluxed overnight. The mixture was cooled to room temperature, concentrated under reduced pressure to an oil that was neutralized with saturated sodium carbonate, overlaid with ethyl acetate (100 mL), re-extracted with ethyl acetate (100 mL), dried with magnesium sulfate, filtered and concentrated under reduced pressure to a pink solid (quinoline-7-carboxylic acid methyl ester, 16.10 g. 77%).

## Synthesis of 7-azidomethyl-quinoline:

25 7-Bromomethyl-quinoline (2.11 g, 10.0 mmols) was dissolved in 20 mL of DMF and sodium-azide (0.975 g, 15.0 mmols) was added and heated to 75C for 16 hours. The solution was cooled, poured into water (100 mL), extracted with EtOAc (2 x 50 mL), washed with water were (2 x 50 mL), brine (1 x 50 mL), dried with magnesium sulfate, filtered and concentrated under reduced pressure to a pink oil (7-azidomethy-quinoline, 1.83g, 99%).

### Synthesis of C-quinolin-7-yl-methylamine:

7-Azidomethyl-quinoline (1.76 g, 9.5 mmols) was hydrogenated in the presence of Raney Nickel in methanol at room temperature. The solution was concentrated under reduced and the solution was concentrated under the solution was concentrated under the solution and the solution was concentrated under the solution was concentrated under the solution was concentrated under the solution and the solution was concentrated under the solution was concentrated unde pressure to a yellow oil, dissolved in ethyl acetate (50 mL), extracted with 1N hydrochloric acid

Marketine in

-40-

(3 x 50 mL); pH adjusted to 10 with 1N sodium hydroxide, extracted with ethyl acetate (3 x 50 mL); mL), dried with magnesium sulfate, filtered and concentrated under reduced pressure to a white solid (C-quinolin-7-yl-methylamine, 0.811 g, 54%). tlc: Rf = 0.00 (EtOAc). H1-NMR and APCI are consistent:

## Method D: Synthesis of 6-aminomethyl-naphthalen-2-ol

5

25

30

STREET OF FREE TO BE THERE

Being read County Office of a first formal

6-Hydroxy-naphthalene-2-carbonitrile was hydrogenated in the presence of Raney Nickel in methanol and aqueous ammonia. The solution was concentrated under reduced pressure to a semi-solid, which was partitioned between ethyl acetate, and water (50 mL each), separated, washed with water (50 mL), brine (50 mL), dried with magnesium sulfate, filtered and concentrated under reduced pressure to a white solid (6-aminomethyl-naphthalen-2-ol, 1.05: 1 g, quantitative).

# Method E: Synthesis of C-benzofuran-5-yl-methylamine

Comparison on the second

## Synthesis of 1-(2,2-diethoxy-ethoxy)-4-methyl-benzene:

p-Cresol (20.0 g, 184.9 mmols), bromoacetaldehyde diethyl acetal (37.2 g, 183.1 mmols) and potassium hydroxide (12:0 g, 183 mmols) were combined in 100 mL of dry DMSO and heated managed in to reflux overnight. The solution turned black, was cooled, poured over ice containing 3.5 grams of sodium hydroxide and diluted to 500 mL with water, extracted with ethyl ether (4 x grams of sodium hydroxide and diluted to 500 mL with water, extracted with ethyl ether (4 x grams of sodium hydroxide and diluted to 500 mL with water, extracted with ethyl ether (4 x grams of sodium hydroxide and diluted to 500 mL with water, extracted with ethyl ether (4 x grams of sodium hydroxide and diluted to 500 mL with water, extracted with ethyl ether (4 x grams of sodium hydroxide and diluted to 500 mL with water, extracted with ethyl ether (4 x grams of sodium hydroxide and diluted to 500 mL with water, extracted with ethyl ether (4 x grams of sodium hydroxide and diluted to 500 mL with water, extracted with ethyl ether (4 x grams of sodium hydroxide and diluted to 500 mL with water, extracted with ethyl ether (4 x grams of sodium hydroxide and diluted to 500 mL with water, extracted with ethyl ether (4 x grams of sodium hydroxide and diluted to 500 mL with water, extracted with ethyl ether (4 x grams of sodium hydroxide and diluted to 500 mL with water, extracted with ethyl ether (4 x grams of sodium hydroxide and diluted to 500 mL with water, extracted with ethyl ether (4 x grams of sodium hydroxide and diluted to 500 mL with water, extracted with ethyl ether (4 x grams of sodium hydroxide and diluted to 500 mL with water). 100 mL), combined, washed with 1N sodium hydroxide (1 x 100 mL), water (4 x 100 mL), brine washed with 1N sodium hydroxide (1 x 100 mL), water (4 x 100 mL), brine washed with 1N sodium hydroxide (1 x 100 mL), water (4 x 100 mL), brine washed with 1N sodium hydroxide (1 x 100 mL), water (4 x 100 mL), brine washed with 1N sodium hydroxide (1 x 100 mL), water (4 x 100 mL), brine washed with 1N sodium hydroxide (1 x 100 mL), water (4 x 100 mL), brine washed with 1N sodium hydroxide (1 x 100 mL), water (4 x 100 mL), brine washed with 1N sodium hydroxide (1 x 100 mL), water (4 x 100 mL), brine washed with 1N sodium hydroxide (1 x 100 mL), water (4 x 100 mL), brine washed with 1N sodium hydroxide (1 x 100 mL), water (4 x 100 mL), brine washed washed with 1N sodium hydroxide (1 x 100 mL), water (4 x 100 mL), brine washed was (1 x 100 mL), dried with magnesium sulfate, filtered and concentrated under reduced pressure to a red oil. The was passed through a plug of silica (ethyl acetate:hexanes (1:2)), combined, and concentrated under reduced pressure to a yellow oil (1-(2,2-diethoxy-ethoxy)-4-methylebenzene; and the second of t 31.2 g, 76%).

#### Synthesis of 5-methyl-benzofuran:

(1-(2,2-Diethoxy-ethoxy)-4-methyl-benzene (10.2 g, 45.5 mmols) and polyphosphoric acid (10.2 1 1.2) g) were combined in 200 mL of benzene and brought to reflux for 3.5 hours. Tlc shows: disappearance of starting material and a new major spot. The reaction mixture was cooled to room temperature, decanted from the polyphosphoric acid, concentrated under reduced pressure -41-

49.00 . 10.00

and purified on silica (ethyl acetate:hexanes (1:5)). Fractions were combined and concentrated was de sunder reduced pressure to a yellow liquid (5-methyl-benzofuran, 4.61 g, 77%).

#### Synthesis of 5-bromomethyl-benzofuran:

5 5-Methyl-benzofuran (4.50 g, 34.0 mmols) was dissolved in carbon tetrachloride (100 mL) and benzoyl peroxide (200 mg) and M-bromosuccinimide (6.06 g, 34.0 mmols) were added. The say an emixture was refluxed for 30 hours, cooled to room temperature, concentrated under reduced - the research pressure and purified on silica (ethyl acetate:hexanes (1:10)).. Appropriate fractions were combined and concentrated under reduced pressure to an orange oil that crystallized overnight which was purified on silica (hexanes), appropriate fractions were combined and concentrated

under reduced-pressure to a clear oil that crystallized (5-bromomethyl-benzofuran, 2.52 g, 35%).

Synthesis of 5-azidomethyl-benzofuran:

5-Bromomethyl-benzofuran (2.35 g, 11.1 mmols) was dissolved in 20 mL of N,N-

dimethylformamide and sodium azide (1.1 g, 17.0 mmols) was added and heated to 75C for 16 minutes and sodium azide (1.1 g, 17.0 mmols) was added and heated to 75C for 16 minutes are solid and heated to 75C for 16 minutes are solid and heated to 75C for 16 minutes are solid and heated to 75C for 16 minutes are solid and heated to 75C for 16 minutes are solid and heated to 75C for 16 minutes are solid and heated to 75C for 16 minutes are solid and heated to 75C for 16 minutes are solid and heated to 75C for 16 minutes are solid and heated to 75C for 16 minutes are solid and heated to 75C for 16 minutes are solid and heated to 75C for 16 minutes are solid and heated to 75C for 16 minutes are solid and heated to 75C for 16 minutes are solid and heated to 75C for 16 minutes are solid and heated and heated to 75C for 16 minutes are solid and heated and heated and heated are solid and heated and heated are solid and heated are h. The solution was cooled, poured into water (100 mL), extracted with ethyl acetate (2 x 50 mL), washed with water (2 x 50 mL), brine (1 x 50 mL), dried with magnesium sulfate, filtered and concentrated under reduced pressure to a yellow oil (5-azidomethyl-benzofuran, 1.907g, and concentrated under reduced pressure to a yellow oil (5-azidomethyl-benzofuran, 1.907g, and the second of the second o 

# Synthesis of C-benzofuran-5-yl-methylamine:

De. 20th Control State State Control C

5-Azidomethyl-benzofuran was hydrogenated with Raney Nickel in tetrahydrofuran. The solution was concentrated under reduced pressure to a yellow oil. The oil was dissolved in ethyle was an son and acetate (50 mL), extracted with 1N hydrochloric acid (3 x 50 mL), pH adjusted to 10 with 1N extracted sodium hydroxide, extracted with ethyl acetate (3 x 50 mL), dried with magnesium-sulfate, filtered and concentrated under reduced pressure to a white solid (C-benzofuran-5-yl-...... methylamine, 0.855 g, 54%).

#### **Method F: Synthesis of C-(1H-indol-5-yl)-methylamine:**

30

. The Fi

5-Cyanoindole was hydrogenated over Raney Nickel in methanol with aqueous ammonia. The solution was concentrated under reduced pressure to a light yellow solid (C-(1H-11-100)) indol-5-yl)-methylamine, 5.25 g, quantitative).

25 amino]-piperidine-1-carboxylic acid tert-butyl ester:

3-Amino-4-{4-[3-(2-fluoro-benzyloxy)-propoxy]-phenyl}-piperidine-1-carboxylic acid tertbutyl ester, prepared as in Example H, (300 mg), quinoline-7-carbaldehyde (150mg), prepared by reacting 7-methylquinoline and selenium dioxide at 160 °C, and AcOH(20mg) in 5 mL of the reacting 7-methylquinoline and selenium dioxide at 160 °C, and AcOH(20mg) in 5 mL of the reacting 7-methylquinoline and selenium dioxide at 160 °C, and AcOH(20mg) in 5 mL of the reacting 7-methylquinoline and selenium dioxide at 160 °C, and AcOH(20mg) in 5 mL of the reacting 7-methylquinoline and selenium dioxide at 160 °C, and AcOH(20mg) in 5 mL of the reacting 7-methylquinoline and selenium dioxide at 160 °C, and AcOH(20mg) in 5 mL of the reacting 7-methylquinoline and selenium dioxide at 160 °C, and AcOH(20mg) in 5 mL of the reacting 7-methylquinoline and 8-methylquinoline and 8-methylquinoline and 8-methylquinoline at 160 °C, and AcOH(20mg) in 5 mL of the reacting 7-methylquinoline at 160 °C, and AcOH(20mg) in 5 mL of the reacting 7-methylquinoline at 160 °C, and AcOH(20mg) in 5 mL of the reacting 7-methylquinoline at 160 °C, and AcOH(20mg) in 5 mL of the reacting 7-methylquinoline at 160 °C, and AcOH(20mg) in 5 mL of the reacting 7-methylquinoline at 160 °C, and AcOH(20mg) in 5 mL of the reacting 7-methylquinoline at 160 °C, and AcOH(20mg) in 5 mL of the reacting 7-methylquinoline at 160 °C, and AcOH(20mg) in 5 mL of the reacting 7-methylquinoline at 160 °C, and AcOH(20mg) in 5 mL of the reacting 7-methylquinoline at 160 °C, and AcOH(20mg) in 5 mL of the reacting 7-methylquinoline at 160 °C, and AcOH(20mg) in 5 mL of the reacting 7-methylquinoline at 160 °C, and AcOH(20mg) in 5 mL of the reacting 7-methylquinoline at 160 °C, and AcOH(20mg) in 5 mL of the reacting 7-methylquinoline at 160 °C, and AcOH(20mg) in 5 mL of the reacting 7-methylquinoline at 160 °C, and AcOH(20mg) in 5 mL of the reacting 7-methylquinoline at 160 °C, and AcOH(20mg) in 5 mL of the reacting 7-methylquinoline at 160 °C, and AcOH(20mg) in 5 mL of the reacting 7-methylquinoline at 160 °C, and AcOH(20mg) in 5 mL of the reacting 7-methylquinoline at 160 °C, and AcOH(20mg) in 5 mL of the reacting 7-methylquinoline at 160 °C, and AcOH(20mg) at 160 °C

DCM were combined and stirred at RT for 45 min. NaBH(OAc)<sub>3</sub> (150mg) was then added and the reaction stirred at RT overnight. 2 mL of NaHCO<sub>3</sub>(Sat) and 5g of NaHCO<sub>3</sub> were then added sequentially with stirring. The reaction mixture was filtered, concentrated and purified with a short packed silica gel column, eluted with 5% to 35% EtOAc/hexanes, to get the title compound as a white solid (155mg), MS m/z 600 (M+1).

Deprotection of 4-{4-[3-(2-Fluoro-benzyloxy)-propoxy]-phenyl}-3-[(quinolin-7-ylmethyl)-amino]-piperidine-1-carboxylic acid tert-butyl ester: 4-{4-[3-(2-Fluoro-benzyloxy)-propoxy]-phenyl}-3-[(quinolin-7-ylmethyl)-amino]-piperidine-1-carboxylic acid tert-butyl ester (55mg) in 10 mL of EtOAc and 2 mL of 1M HCl(in ether) were combined and stirred at RT over 2 days. The reaction mixture was decanted, dried and concentrated to give the free base (75 mg) which was converted to the HCl salt with 3 eq. of 1M HCl(in ether) and 5 mL of MeOH.

MS m/z 500 (M+1).

Example 23

Synthesis of [1-(2-dimethylamino-ethyl)-1, 2, 3, 4-tetrahydro-quinolin-7-ylmethyl]-(4-{4-[3-(2-methoxybenzyloxy)-propoxy]-phenyl}-piperidin-3-yl)-amine

Preparation of 3-[(1-dimethylcarbamoylmethyl-1, 2, 3, 4-tetrahydro-quinoline-7carbonyl)-amino]-4-{4-[3-(2-methoxy-benzyloxy)-propoxy]-phenyl}-piperidine-1carboxylic acid tert-butyl ester borane complex: To a solution of 3-[(1dimethylcarbamoylmethyl-1, 2, 3, 4-tetrahydro-quinoline-7-carbonyl)-amino]-4-{4-[3-(2methoxy-benzyloxy)-propoxy]-phenyl}-piperidine-1-carboxylic acid tert-butyl ester, prepared as . in Example 22 (0.3 g, 0.49 mmol), in 10 mL of THF was added 1M BH<sub>3</sub> dimethylsulfide solution in THF dropwise at 0 °C. The resulting mixture was stirred at room temperature overnight and refluxed for 6 h. After removal of solvent, the residue was refluxed in methanol overnight. The methanol was removed under vacuum and the residue diluted in CH<sub>2</sub>Cl<sub>2</sub> and washed with saturated solution of NaHCO<sub>3</sub>. The organic layer was washed with H<sub>2</sub>O and brine. dried over Na<sub>2</sub>SO<sub>4</sub>, and concentrated under vacuum. The residue was subjected to flash column chromatography (50% EtOAc/hexanes) to give 0.14 g (50%) of 3-[(1-All Sales and All Sales and Al dimethylcarbamoylmethyl-1, 2, 3, 4-tetrahydro-quinoline-7-carbonyl)-amino]-4-{4-[3-(2methoxy-benzyloxy)-propoxy]-phenyl}-piperidine-1-carboxylic acid tert-butyl ester borane complex. <sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>)  $\delta$ : 7.35 (dd, J = 1.5 Hz, J = 7.3 Hz, 1 H), 7.26-7.23 (m, 1 . . . . H), 7.09-7.05 (m, 2 H), 6.94-6.91 (m, 1 H), 6.86-6.76 (m, 4 H), 6.53 (s, 1 H), 6.22 (dd,  $J = 1.0^{\circ}$ Hz, J = 7.3 Hz, 1 H), 4.56 (s, 2 H), 4.52-4.36 (m, 1 H), 4.08 (t, J = 6.3 Hz, 2 H), 3.80 (s, 3 H), 3.75 (t, J = 5.9 Hz, 2 H), 3.69-3.57 (m, 2 H), 3.43-3.32 (m, 3 H), 3.28 (t, J = 5.9 Hz, 2 H), 3.01-3.01

 $R^3$ 
 $Q$ 
 $T$ 
 $R^4$ 
 $R^6$ 
 $R^5$ 
 $R^7$ 

or a pharmaceutically acceptable salt thereof, wherein

R<sup>1</sup> and R<sup>2</sup> are independently hydrogen or unsubstituted C<sub>1</sub>-C<sub>3</sub> alkyl;

R<sup>3</sup> is hydrogen, oxo, or thioxo;

 $R^0$  is hydrogen or unsubstituted  $C_1$ - $C_3$  alkyl provided that when  $R^3$  is oxo or thioxo  $R^0$  is absent;

 $R^4$ ,  $R^5$ ,  $R^6$ , and  $R^7$  are independently hydrogen, halogen, carboxyl, substituted or unsubstituted  $C_1$ - $C_3$  alkoxy, or substituted or unsubstituted  $C_1$ - $C_3$  alkyl;

Q is  $-NR^8$  (CH<sub>2</sub>)<sub>0-6</sub>-,  $-NR^9$ -C(O)-(CH<sub>2</sub>)<sub>0-6</sub>-, wherein 1 to 3 nonadjacent methylene units are replaced with O,  $NR^{10}$ , S or a combination thereof;

T is substituted or unsubstituted aryl, substituted or unsubstituted heteroaryl, or substituted or unsubstituted  $C_1$ - $C_{12}$  alkyl;

W is absent, substituted or unsubstituted aryl, or substituted or unsubstituted heteroaryl;

Z is -(CH<sub>2</sub>)<sub>0-6</sub>-cycloalkylene-(CH<sub>2</sub>)<sub>0-6</sub>- wherein 0 to 6 nonadjacent methylene units are replaced with O, NR  $^{12}$ , S or a combination thereof,

-(CH<sub>2</sub>)<sub>0-6</sub>-heterocycloalkylene-(CH<sub>2</sub>)<sub>0-6</sub>- wherein 0 to 6 nonadjacent methylene units are replaced with O, NR<sup>12</sup>, S or a combination thereof,

-(CH<sub>2</sub>)<sub>0.6</sub>-arylene-(CH<sub>2</sub>)<sub>0.6</sub>- wherein 0 to 6 nonadjacent methylene units are replaced with O, NR<sup>12</sup>, S or a combination thereof,

the Land Robert of CH<sub>2</sub>)<sub>0-6</sub>-heteroarylene-(CH<sub>2</sub>)<sub>0-6</sub>- wherein 0 to 6 nonadjacent methylene units are - who will a replaced with O, NR<sup>12</sup>, S or a combination thereof;

replaced with O,  $NR^{12}$ , S or a combination thereof,

-(CH<sub>2</sub>)<sub>0.6</sub>- MR<sup>11</sup>-C(O)-(CH<sub>2</sub>)<sub>0.6</sub>- wherein 0 to 6 nonadjacent methylene units are replaced with O, MR<sup>12</sup>, S or a combination thereof,

$$\begin{array}{c}

\downarrow \\
R^{14}
\end{array}$$

R<sup>15</sup> ...

wherein 1 to 6 nonadjacent R<sup>14</sup> units are replaced with O, NR<sup>12</sup>, S or a combination thereof, or

Z, when W is absent, is hydroxyl, substituted or unsubstituted  $C_1$ - $C_{12}$  alkyl wherein 1 to 6 nonadjacent methylene units are replaced with O, NR<sup>16</sup>, S or a combination thereof, or -(CH<sub>2</sub>)<sub>0.6</sub>-C(O)-NR<sup>16</sup>-(CH<sub>2</sub>)<sub>0.5</sub>-CH<sub>3</sub> wherein 0 to 6 nonadjacent methylene units are replaced with O, NR<sup>16</sup>, S or a combination

15 thereof;

R<sup>8</sup>, R<sup>9</sup> and R<sup>10</sup> are independently hydrogen or substituted or unsubstituted C<sub>1</sub>-C<sub>3</sub> alkyl;

R<sup>11</sup> and R<sup>12</sup> are independently substituted or unsubstituted C<sub>1</sub>-C<sub>3</sub> alkyl; and

R<sup>14</sup> and R<sup>15</sup> are independently hydrogen, substituted or unsubstituted C<sub>1</sub>-C<sub>3</sub> alkoxy,

substituted or unsubstituted C<sub>1</sub>-C<sub>3</sub> alkyl, unsubstituted C<sub>1</sub>-C<sub>12</sub> alkyl wherein 1 to

6 nonadjacent methylene units are replaced with O, or R<sup>14</sup> and R<sup>15</sup> together with

the carbon to which they are attached form a 3- to 6-membered cycloalkylene or

heterocycloalkylene ring; and

R<sup>16</sup> is substituted or unsubstituted C<sub>1</sub>-C<sub>3</sub> alkyl or hydrogen.

- 25 2. A compound of claim 1, wherein R<sup>1</sup> and R<sup>2</sup>, are hydrogen and R<sup>3</sup> is oxo.
  - 3. A compound of claim 1 or 11, wherein T is substituted aryl

4. A compound of claim 3, wherein T is substituted phenyl, naphthyl, biphenyl, 1;2,3,4tetrahydroquinolinyl, 2-oxo-1, 2, 3, 4-tetrahydroquinolinyl, 1, 2, 3, 4-tetrahydro-naphthyl, 1, 2, 3, 4-tetrahydroquinolinyl, 1, 2, 3, 4-tetrahydro-naphthyl, 1, 2, 3, 4-tetrahydro-naphthyltetrahydroisoquinolinyl, 1;2,3,4-tetrahydroquinoxalinyl, 1,2,3,4-tetrahydroindolyl, 2;3dihydroindolyl, 3-oxo-3,4-dihydro-2H-benzo[1,4]oxazinyl, or 3,4-dihydro-2H-1. T. 1. T. 1. 2. . ".5 benzo[1,4]oxazinyl. -A Secretary Services 5.50 - A compound of claim 1 or 11, wherein T is naphthyl, 1,2,3,4-tetrahydroquinolinyl, 2- 1000 - 4.5 oxo-1,2,3,4-tetrahydroquinolinyl, 1,2,3,4-tetrahydronaphthyl, 1,2,3,4-tetrahydroisoquinolinyl, 5 to 4 - 1,2,3,4-tetrahydroquinoxalinyl, 3,4-dihydro-2H-benzo[1,4]oxazinyl, 3-oxo-3,4-dihydro-2H-# 10 = benzo[1,4]oxazinyl, 2,3-dihydroindolyl, or 1,2,3,4-tetrahydroindolyl substituted from 1 to 7 times with, C<sub>1</sub>-C<sub>6</sub> alkyl, halo, hydroxy, oxo, C<sub>1</sub>-C<sub>6</sub> alkyl wherein 1 to 3 nonadjacent carbons are the control of the con Francis (replaced with O, NR<sup>16</sup>, S or a combination thereof, (C<sub>1</sub>-C<sub>6</sub> alkyl)-C(O)-O-(C<sub>1</sub>-C<sub>6</sub> alkyl)<sub>O-1</sub>-, (C<sub>1</sub>-constants)  $-1.45 + -\frac{1}{2} - \frac{1}{2} - \frac{1}{$  $C_6$ -alkyl)-NR<sup>16</sup>-S(O)2-(C<sub>1</sub>-C<sub>6</sub>-alkyl)<sub>0-1</sub>-, or HO-(C<sub>1</sub>-C<sub>6</sub> alkyl), wherein each R<sup>16</sup> is independently  $C_6$ -alkyl) Hor Ci-Ce alkyl or a combination thereof. 

A compound of claim 1 or 11, wherein T is unsubstituted naphthyl, unsubstituted 4-5-indolyl, 1-(2-acetylaminoethyl)-5-indolyl, 1-(3-methoxypropyl)-5-indolyl, 1-acetamidyl-5- acetamidyl-5indolyl, 1-(2-acetoxyethyl)-5-indolyl, 1-(3-methoxy-3-oxopropyl)-5-indolyl, 1-(2-methoxy-2-www.col. -coxoethyl)-5-indolyl, 1-(2-ethoxy-2-oxoethyl)-6-indolyl, 1-(2-acetylaminoethyl)-6-indolyl, 1-(3-acetylaminoethyl)-6-indolyl, 1-(3-acetylaminoe indexypropyl)-6-indolyl, 1-acetamidyl-6-indolyl, 1-(2-acetoxyethyl)-6-indolyl, 1-(3-methoxyethyl) 25: 3-oxopropyl)-6-indolyl, 1-(2-methoxy-2-oxoethyl)-6-indolyl, 4-(2-ethoxy-2-oxoethyl)-3-oxo-3-oxopropyl methoxypropyl)-3-oxo-3,4-dihydro-2H-benzo[1,4]oxazin-6-yl, 4-(2-acetylaminoethyl)-3-oxo-3,4-dihydro-2H-benzo[1,4]oxazin-6-yl, 4-acetamidyl-3-oxo-3,4-dihydro-2H-benzo[1,4]oxazin-6-yl, 4-(2-acetoxyethyl)-3-oxo-3,4-dihydro-2H-benzo[1,4]oxazin-6-yl, 4-(3-methoxy-3-30 oxopropyl)-3-oxo-3,4-dihydro-2H-benzo[1,4]oxazin-6-yl, 4-(2-methoxy-2-oxoethyl)-3-oxo-3,4- .... hydroxypropyl)-2-oxo-3,4-dihydro-2H-quinolin-7-yl, 1-acetyl-3,4-dihydro-2H-quinolin-6-yl, 12-acetyl-3,4-dihydro-2H-quinolin-6-yl, 12-acetyl-3,4-dihydro-2H-quinolin-6acetyl-2-oxo-3,4-dihydro-2H-quinolin-6-yl, 1-(4-thiazolylmethyl)-3,4-dihydro-2H-quinolin-7-yl, ...

#### **INTERNATIONAL SEARCH REPORT**

Box II Observations where certain claims were found unsearchable (Continuation of item 2 of first sheet)				
This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:				
1. X Claims Nos.: because they relate to subject matter not required to be searched by this Authority, namely:				
Although claims 14 and 15 are directed to a method of treatment of the human/animal body, the search has been carried out and based on the alleged effects of the compound/composition.				
Claims Nos.:     because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:				
3. Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).				
Box III Observations where unity of invention is lacking (Continuation of item 3 of first sheet)				
This International Searching Authority found multiple inventions in this international application, as follows:				
As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.				
2. As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.				
3. As only some of the required additional search fees were timely pald by the applicant, this international Search Report covers only those claims for which fees were paid, specifically claims Nos.:				
4. No required additional search fees were timely paid by the applicant. Consequently, this international Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:
